

## **Problem Statement:**

You work for XYZ Corporation. Your team is asked to deploy similar architecture multiple times for testing, development, and production purposes. Implement CloudFormation for the tasks assigned to you below.

## **Tasks To Be Performed:**

1. Create a FIFO SQS queue and test by sending messages.
2. Register your mail in SES and send a test mail to yourself.

Gmail and Yahoo are introducing new sending requirements in February 2024, which may change your email delivery rates. Click [here](#) to learn more.

Customer engagement

# Amazon SES

## Highly-scalable inbound and outbound email service

Amazon Simple Email Service (SES) is a cloud-based email service that provides cost-effective, flexible and scalable way for businesses of all sizes to keep in contact with their customers through email.

### Start using Amazon Simple Email Service

Get started with SES by verifying an email address and sending domain so that you can start sending email through SES.

[Get started](#)

### Pricing

With Amazon SES, you only pay for what you use. There are no contract negotiations, no minimum usage requirements and no hidden charges.

[Pricing](#)

## Create identity

An *identity* is a domain, subdomain, or email address you use to send email through Amazon SES. Identity verification at the domain level extends to all email addresses under one verified domain identity.

### Identity details [Info](#)

#### Identity type

☐ Domain

To verify ownership of a domain, you must have access to its DNS settings to add the necessary records.

☒ Email address

To verify ownership of an email address, you must have access to its inbox to open the verification email.

**i** Sending email from an email address identity without having the domain identity verified will result in your message being quarantined or rejected depending on the domain's DMARC policy. [Learn more about DMARC and how to look up a domain's DMARC policy.](#)

#### Email address

rsujithsri16@gmail.com

Email address can contain up to 320 characters, including plus signs (+), equals signs (=) and underscores ( ).

## Amazon Web Services – Email Address Verification Request in region US East (N. Virginia)

Inbox x

**Amazon Web Services** <no-reply-aws@amazon.com>  
to me

12:10 (0 minutes ago)

Dear Amazon Web Services Customer,

We have received a request to authorize this email address for use with Amazon SES and Amazon Pinpoint in region US East (N. Virginia). If you requested this verification, please go to the following URL to confirm that you are authorized to use this email address:

[https://email-verification.us-east-1.amazonaws.com/?Context=602093162468&X-Amz-Date=20240412T064035Z&Identity.IdentityName=rsujithsri16%40gmail.com&X-Amz-Algorithm=AWS4-HMAC-SHA256&Identity.IdentityType=EmailAddress&X-Amz-SignedHeaders=host&X-Amz-Credential=AKIAVM67ZIEFRDEC3HF%2F20240412%2Fus-east-1%2Fses%2Faws4\\_request&Operation=ConfirmVerification&Namespace=Bacon&X-Amz-Signature=af0fa40e1f204b22b402b13924f1f312d0ad719ebd00980afee908d5048e8248](https://email-verification.us-east-1.amazonaws.com/?Context=602093162468&X-Amz-Date=20240412T064035Z&Identity.IdentityName=rsujithsri16%40gmail.com&X-Amz-Algorithm=AWS4-HMAC-SHA256&Identity.IdentityType=EmailAddress&X-Amz-SignedHeaders=host&X-Amz-Credential=AKIAVM67ZIEFRDEC3HF%2F20240412%2Fus-east-1%2Fses%2Faws4_request&Operation=ConfirmVerification&Namespace=Bacon&X-Amz-Signature=af0fa40e1f204b22b402b13924f1f312d0ad719ebd00980afee908d5048e8248)

Your request will not be processed unless you confirm the address using this URL. This link expires 24 hours after your original verification request.

If you did NOT request to verify this email address, do not click on the link. Please note that many times, the situation isn't a phishing attempt, but either a misunderstanding of how to use our service, or someone setting up email-sending capabilities on your behalf as part of a legitimate service, but without having fully communicated the procedure first.

To learn more about sending email from Amazon Web Services, please refer to the Amazon SES Developer Guide at <http://docs.aws.amazon.com/ses/latest/DeveloperGuide/Welcome.html> and Amazon Pinpoint Developer Guide at <http://docs.aws.amazon.com/pinpoint/latest/userguide/welcome.html>.

Sincerely,

The Amazon Web Services Team.

## Congratulations!

You have successfully verified an email address. You can now start sending email from this address.

**For new Amazon SES users** — If you have not yet applied for a sending limit increase, then you are still in the [sandbox environment](#), and you can only send email to addresses that have been verified. To verify a new email address or domain, see the **Identity Management** section of the [Amazon SES console](#).

**For new Amazon Pinpoint users** — If you have not yet applied for a sending limit increase, then you are still in the [sandbox environment](#), and you can only send email to addresses that have been verified. To verify a new email address or domain, see the **Settings > Channels** page on the [Amazon Pinpoint console](#).

If you have already been approved for a sending limit increase, then you can start sending email to non-verified addresses.

Thank you for using Amazon Web Services!

[Go to the Amazon SES detail page.](#)

Be careful with this message

This may be a spoofed message. The message claims to have been sent from your account, but Gmail couldn't verify the actual source. Avoid clicking links or replying with sensitive information, unless you are sure that you actually sent this message. (No need to reset your password, the real sender does not actually have access to your account!)

# Simple Mail Transfer Protocol (SMTP) settings

Create SMTP credentials

You can use an SMTP-enabled programming language, email server, or application to connect to the Amazon SES SMTP interface. You'll need the following information and a set of SMTP credentials to configure this email sending method in US East (N. Virginia).

Simple Mail Transfer Protocol (SMTP) settings

Info

SMTP endpoint

email-smtp.us-east-1.amazonaws.com

Transport Layer Security (TLS)

Required

STARTTLS Port

25, 587 or 2587

Custom SSL client support

-

TLS Wrapper Port

465 or 2465

Manage existing SMTP credentials

You must have an Amazon SES SMTP user name and password to access the SMTP interface. These credentials are different from your AWS access keys and are unique to each region.

Manage my existing SMTP credentials

## Specify user details

### Create user for SMTP

Create an IAM user with SMTP credentials for SMTP authentication with Amazon SES.

#### User name

ses-smtp-user.20240412-121716

The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ \_ - (hyphen)

#### Permissions policy for user

This permissions policy gives the user permissions to access AWS SES.

```
1 {  
2   "Version": "2012-10-17",  
3   "Statement": [  
4     {  
5       "Effect": "Allow",  
6       "Action": "ses:SendRawEmail",  
7       "Resource": "*"   
8     }  
9   ]  
10 }
```

ses-smtp-user.20240412-121716

The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ \_ - (hyphen)

### Permissions policy for user

This permissions policy gives the user permissions to access AWS SES.

```
1 {  
2   "Version": "2012-10-17",  
3   "Statement": [  
4     {  
5       "Effect": "Allow",  
6       "Action": "ses:SendRawEmail",  
7       "Resource": "*"   
8     }  
9   ]  
10 }
```

### Tags - optional

Tags are key-value pairs you can add to AWS resources to help identify, organize, or search for resources. Choose any tags you want to associate with this user.

No tags associated with the resource.

Add new tag

You can add up to 50 more tags.

Cancel

Create

## Create queue

### Details

#### Type

Choose the queue type for your application or cloud infrastructure.

☐ Standard [Info](#)

At-least-once delivery, message ordering isn't preserved

- At-least once delivery
- Best-effort ordering

☒ FIFO [Info](#)

First-in-first-out delivery, message ordering is preserved

- First-in-first-out delivery
- Exactly-once processing

[i](#) You can't change the queue type after you create a queue.

#### Name

Myqueue

A queue name is case-sensitive and can have up to 80 characters. You can use alphanumeric characters, hyphens (-), and underscores (\_).

### Configuration [Info](#)

## Configuration [Info](#)

Set the maximum message size, visibility to other consumers, and message retention.

### Visibility timeout [Info](#)

 Seconds ▼

Should be between 0 seconds and 12 hours.

### Delivery delay [Info](#)

 Seconds ▼

Should be between 0 seconds and 15 minutes.

### Receive message wait time [Info](#)

 Seconds

Should be between 0 and 20 seconds.

### Message retention period [Info](#)

 Minutes ▼

Should be between 1 minute and 14 days.

### Maximum message size [Info](#)

 KB

Should be between 1 KB and 256 KB.

## FIFO queue settings

☐ Content-based deduplication

When content-based deduplication is enabled, the message deduplication ID is optional.

☒ High throughput FIFO queue (recommended) [Info](#)

Configure your FIFO queue for maximum throughput.

[i](#) High throughput for FIFO queues supports a higher number of transactions per second, per API.

High throughput for FIFO queues supports a higher number of transactions per second, per API.

### Deduplication scope [Info](#)

Specify the scope of deduplication for a FIFO queue.

☒ Queue

Deduplicate all messages in a queue.

☐ Message group

Deduplicate all messages that belong to the same message group.

### FIFO throughput limit [Info](#)

Specify how to apply the throughput limit on FIFO queue.

☒ Per queue

Apply the throughput limit at the queue level.

☐ Per message group ID

Apply the throughput limit at the message group level.

### Encryption [Info](#)

Amazon SQS provides in-transit encryption by default. To add at-rest encryption to your queue, enable server-side encryption.

#### Server-side encryption

☒ Disabled

☐ Enabled

### Access policy [Info](#)

Define who can access your queue.

#### Choose method

☐ Basic

Use simple criteria to define a basic access policy.

☒ Advanced

Use a JSON object to define an advanced access policy.
